## ABOUT WISPIVAS

Winam safe parenthood initiative (WISPIVAS) started as a post vasectomy club where men could converge to share their experiences on NSV and encourage other men to do the same. Women too joined the group.

They were so happy that their husbands took up personal responsibility in Family Planning, exercising their reproductive health right under Kenya's constitution article 43 (1) (a). Men are encouraged to sire just the right number of children they can nurture comfortably.

## GOALS AND OBJECTIVES

Mon to Sat - 8:00am to 6:00pm (Sunday Closed)

Below are the WISPIVAS Goals and Objective

- + Provide male participation in family planning.
- + Accreditation of Non Scalpel Vasectomy Centers(NSV).
- + Counseling of clients, voluntary decision making
- + Target free approach, children by choice not chance
- + Training of Doctors, medical students and policy makers on NSV.
- + Standardization and quality assurance of NSV in Kenya.
- + Redress social injustice by gradually shifting responsibility of family planning from female to male.

Health Support

Vasectomy

Counselling

Health Protection

Vasectomy is a dependable method of birth control for men who think their family is complete and will not need children again.

The objective is to prevent sperm from entering the semen. 95% of which is support fluid made by glands called prostate and seminal vesicles located in the pelvis behind and beneath the bladder.

No-scalpel vasectomy instruments, used in China since the mid-70's and introduced into the United States in 1989, are simply a very pointy hemostat, used initially to make a tiny opening into anesthetized skin of the scrotal wall, and a

ring clamp, used initially to secure each vas tube in turn beneath this opening.

The pointy hemostat is then used to spread all layers (the vas sheath) down to the vas tube itself and to then deliver a small loop of the vas through the opening as the ring clamp is released. In turn, the ring clamp is used to hold the vas, while the pointy hemostat spreads adherent tissue and blood vessels away from the vas under direct vision, so that the vas can then be divided with a fine surgical scissors and the upper end cauterized with a hand-held cautery unit so that it will seal closed.

15 min

## Vasectomy Procedure

Vasectomy is a simple day care procedure that takes 15 minutes.

95%

## Spam Free

About 95% of men are sperm free after three months following the procedure.

## CLIENT TESTIMONIAL

Our first born are identical twins and we had planned for their pregnancy. They were born on 22/04/2013. Since then both my wife and I discussed at length and agreed that these two God given children were enough for us and that we would not have any more children. In view of this decision, she opted to use Mycrogynon Combined Pills about 4 months after giving birth. She has been taking this Pills since then which is now slightly over 4 years strictly following the prescribed rules of taking the Pill.

We were shocked to learn that she has become pregnant again while still using the Pill which according to the hospital test done shows that the pregnancy is between 4 to 5 weeks now. This shocking new have resolved our decision to go for the permanent family planning method of Vasectomy as we have really lost confidence in the female family planning programs available in the market. Be as it may, both of us have now come out of the shocking news for the unplanned pregnancy and we are looking forward to have this baby which together with the twins we believe are now the maximum children we needed to have.

# Advantages of NSV

More information about the Advantages of NSV

Save the partner from major operation and its complications.  
Simple and safe, day care office

Operation is 15 minutes with swifter discharge within 2 hours.

Fast recovery

Cost effective.

Sexual activity after operation not affected.

It's an investment; you get time to focus on family and career

Permanent sterilisation

Life time no worry,

Enjoy sexual life without tension of unwanted pregnancy.

No pre-operative preparation & admission

No lengthy lab preparation

No fasting required

No post operative admission

No need for stitch removal.

## Benefits Of Vasectomy

1. It empowers men to nurture fewer children.
2. It enables men to exercise their reproductive health right as enshrined in Kenya's constitution article 43 (1) (a) which states that "every citizen has the right to the highest attainable standard of health, which includes the right to health care services, including reproductive health care"
3. It alleviates the negative side effects of family planning methods on women.
4. It can prevent unsafe abortions and Obstetric Fistulas.
5. It can prevent maternal deaths ("the death of a woman whilst pregnant or within 42 days of delivery or termination of pregnancy, from any cause related to, or aggravated by pregnancy or its management.
6. It can help in the reduction of rapid population growth rate and its negative socioeconomic consequences e.g. unemployment and resource based conflicts.
7. It can prevent deadbeat fatherhood (fathers who do not pay for child support)
8. It can prevent prosecution under article 53 (1) (e) of the Kenya's constitution which states that "Every child has a right to parental care and protection, which includes equal responsibility of the mother and father to provide for the child, whether they are married to each other or not"
9. It can help in the reduction of carbon foot print and mitigation of climate change.
10. It can help in the reduction of the number of Street children

# WHAT WE DO

Talk to Dr. Charles Oching Today for the following services - Call +254 721547978

## Vasectomy

Vasectomy is a dependable method of birth control for men who think their family is complete and will not need children again. The objective is to prevent sperm from entering the semen. Your privacy and confidentiality is guaranteed.

## Hymen & Labia Repair

Hymenoplasty is actually the surgical repair of the hymen, a membrane that partially closes the opening of the vagina. In many cultures and religions, an intact hymen is traditionally taken to indicate a mark of virginity.

## Message From the Director's Desk

“

We are currently in the process of developing a Vasectomy and Reversal Centre here in Kenya.

Below are some of the Functions that we look forward to achieve using such a facility; one of its own kind in Kenya.

- To train doctors.
- To accredit vasectomy facilities.
- Quality assurance and enforcement for vasectomy services in Kenya and East Africa at Large.
- Service delivery to walk in clients.
- Medical tourism for other countries where the service is not readily available.
- Research center for male Family Planning.
- Sperm Banking and Vasectomy reversal services
